

“What Every Business Owner Must Know About Hiring A Honest, Competent, Responsive And Fairly Priced Computer Consultant”

**Don’t Trust Your Company’s Critical Data And
Operations To Just Anyone! This Business Advisory
Guide Will Arm You With 17 Revealing Questions You
Should Ask Any Computer Consultant Before Giving
Them Access To Your Company’s Network**

Choosing the wrong computer consultant to support your network can be incredibly frustrating and expensive, and could end up costing you in downtime, data loss and expensive repair bills, not to mention the headaches and frustration!

Read this guide and you’ll discover:

- ✓ The “dirty little secret” of the computer repair industry that most people don’t know and will never be told by their IT guy (knowing this ALONE could save you from wasting tons of money and untold aggravation when outsourcing your computer support).
- ✓ 17 revealing questions that will help you instantly spot an unethical or grossly incompetent computer repair/support technician in minutes.
- ✓ 3 costly misconceptions most business owners have about computer maintenance and repair, one of which you will need to know about BEFORE even picking up the phone.
- ✓ Viruses, worms, spyware and hackers: what you need to know to protect yourself.
- ✓ 4 mistakes to avoid when choosing a computer consultant.
- ✓ Why “cheap” or “lowest price” computer repair shops aren’t the bargain they initially appear to be.
- ✓ The one surefire sign that you should run – not walk – away from a computer support firm.

Computer Depot Business Solutions

From The Desk of:
Thomas Hill Jr.
President/Project Manager
Computer Depot Business Solutions

Dear Colleague,

Choosing a computer support company isn't easy. There is no shortage of horror stories about incompetent computer repair "gurus" bungling jobs and causing MORE problems as a result of their loose morals or gross incompetence. I'm sure if you talk to your own friends and colleagues you will get an earful of the unfortunate experiences they have encountered in this area.

Why is this? Because the computer repair and consulting industry, along with a lot of other industries, has its own share of incompetent or unethical businesses that will try to take advantage of trusting business owners who simply do not have the ability to determine whether or not the technician knows what they are doing. Sometimes this is out of greed for your money, but more often it's simply because they don't have the skills and competency to do the job right, but they won't tell you that up front. From misleading information and unqualified technicians, to poor management and terrible customer service, we have seen it all...and we know they exist in abundance because we have had a number of customers come to us to clean up the disasters they have caused.

Buyer Beware: The Computer Repair And Consulting Industry Is NOT Regulated

Here's an embarrassing (and little-known) fact about my industry: it is not regulated like many other professional service industries, which means ANYONE can claim they are a "computer repair expert." **In fact, a lot of the businesses in this industry started because the owner was FIRED or laid off from their job and couldn't find work anywhere else. That means many of the so-called experts are useless and make sleazy auto repair shops look like the pinnacle of virtue and competence.**

Automotive repair shops, electricians, plumbers, lawyers, realtors, dentists, doctors, accountants, etc., are heavily regulated to protect the consumer from receiving substandard work or getting ripped off. However, the computer industry is still highly unregulated and there aren't any laws in existence to protect the consumer – which is why it's so important for you to arm yourself with the information contained in this report.

Anyone who can hang out a shingle can promote themselves as a computer expert. Even if they are honestly *trying* to do a good job for you, their inexperience can cost you dearly in your network's speed and performance or in lost or corrupt data files. That is why we decided to offer this report. The information in this guide is provided to help raise standards within the computer repair and support industry, and to give YOU useful information to help you guard against the lack of ethics or incompetence of some companies and technicians.

Dedicated to serving you,

Thomas Hill Jr.

17 Questions You Should Ask Your Computer Consultant Before Hiring Them To Support Your Network

Customer Service:

Q1: Do they answer their phones live or do you always have to leave a voice mail and wait for someone to call you back?

Our Answer: We answer our phones live from 8:00 a.m. to 5:30 p.m. and give all clients an emergency after-hours number they may call if a problem arises, including on weekends. Why? Because many of the CEOs and executives we support work outside normal hours and find it the most productive time they have. If they cannot access their computer network AND can't get hold of anyone to help them, it's incredibly frustrating.

Q2: Do they have a response time to your support calls?

Our Answer: We start working on your support ticket in 20 minutes or less during normal Business hours, we achieve this on over 99% of our support calls.

Q3: Do they take the time to explain what they are doing and answer your questions in terms that you can understand (not geek-speak), or do they come across as arrogant and make you feel stupid for asking simple questions?

Our Answer: We prefer to hire successful customer service agents and then train them to be great IT engineers. See what Jackie Page at The Lucas Center Plastic Surgery had to say:

Exceptional customer service! Thomas and the entire team at Computer Depot Business are THE Information Technology "Go-To" in East TN. They consistently provide professional, prompt, and accurate solutions to any technological question or concern we may have. We rely on Computer Depot Business for all of our IT needs!

Jackie Page, Practice Manager
The Lucas Center Plastic Surgery

Q4: Do they consistently (and proactively) offer new ways to improve your network's performance, or do they wait until you have a problem to make recommendations?

Our Answer: We conduct regular review meetings with our clients to look for new ways to help improve their operations, lower costs, increase efficiencies and resolve any problems that may be arising. Our goal with these meetings is to help our clients be more profitable, efficient and competitive.

Q5: Do they have adequate errors and omissions insurance as well as workers' compensation insurance and Cyber Security insurance designed to protect YOU?

Our Answer: We are absolutely FULLY insured. Here's something to consider: if THEY cause a problem with your network that causes you to be down for hours or days or to lose data, who's responsible? Here's another question to consider: if one of their technicians gets hurt at your office, who's paying? In this litigious society we live in, you better make darn sure whomever you hire is adequately insured with both errors and omissions insurance AND workers' compensation AND a great Cyber Security Policy.

True story: A few years ago, Geek Squad was slapped with multimillion-dollar lawsuits from customers for bad behavior by their technicians. In some cases, their techs were accessing, copying and distributing personal information they gained access to on customers' PCs and laptops brought in for repairs. In other cases, they lost a client's laptop (and subsequently all the data on it) and tried to cover it up. Bottom line: make sure the company you are hiring has proper insurance to protect YOU.

Maintenance Of Your Network:

Q6: Do they insist on remotely monitoring your network 24-7-365 to keep critical security settings, virus definitions and security patches up-to-date and PREVENT problems from turning into downtime, viruses, lost data and other issues?

Our Answer: Yes, our remote network monitoring system watches over your network to constantly look for developing problems, security issues and other problems so we can address them BEFORE they turn into bigger problems.

Q7: Do they provide you with a Monthly report that shows all the updates, security patches and the status of every machine on your network so you know for SURE your systems have been secured and updated?

Our Answer: Every month our clients get a detailed report that shows an overall health score of their network and the updates to their antivirus, security settings, patches and other important network checks.

Q8: Do they have other technicians on staff who are familiar with your network in case your regular technician goes on vacation or gets sick?

Our Answer: Yes; and since we keep detailed network documentation (basically a blueprint of your computer network) and updates on every client's account, any of our technicians can pick up where another one has left off.

Q9: When they offer an “all-inclusive” support plan, is it TRULY all-inclusive, or are their “gotchas” hidden in the fine print?

Our Answer: Our Platinum support plan is just that – all-inclusive. One of the more popular service plans offered by consulting firms today is an “all-inclusive” or “all-you-can-eat” managed services plan. These are actually a good thing because they’ll save you a lot of money in the long run – HOWEVER, make sure you REALLY understand what is and isn’t included. Some things to consider are:

- Is phone/e-mail help desk included or extra?
- What about network upgrades, moves or adding/removing users?
- Is hardware and/or software included?
- What about 3rd-party software support? (We recommend that this IS included.)
- What are the costs/consequences of early cancellation?
- What if you aren’t happy with their services? Do they offer a money-back guarantee?
- Are off-site backups included? To what degree?
- If you have a major disaster, is restoring your network included or extra?
- What about on-site support calls? Or support to remote offices?
- Are home PCs used to access the company’s network after hours included or extra?

Backups And Disaster Recovery:

Q10: Do they INSIST on monitoring an off-site as well as an on-site backup?

Our Answer: We provide every managed client a ransom-proof backup that provides 30 days of revisions so that you will never lose any important documents.

Q11: Do they INSIST on doing periodic test restores of your backups to make sure the data is not corrupt and could be restored in the event of a disaster?

Our Answer: We perform a monthly “fire drill” and perform a test restore from backup for our clients to make sure their data CAN be recovered in the event of an emergency. After all, the WORST time to “test” a backup is when you desperately need it.

Q12: Do they insist on backing up your network BEFORE performing any type of project or upgrade?

Our Answer: We do; and that’s simply as a precaution in case a hardware failure or software glitch causes a major problem.

Technical Expertise And Support:

Q13: Is their help desk US-based or outsourced to an overseas company or third party?

Our Answer: We provide our own in-house help desk and make sure the techs helping you are well trained, professional, and friendly. We consider this one of the most important aspects of our customer service. Plus, we feel it's important for keeping your data secure.

Q14: Do their technicians maintain current vendor certifications and participate in ongoing training – or are they learning on your dime?

Our Answer: Our technicians are required to set professional development goals that supports and ensures that they are current on the latest technology.

Q15: Do their technicians arrive on time and dress professionally?

Our Answer: Our technicians are true professionals that you would be proud to have in your office. They dress professionally, show up on time, and if they cannot (for some odd, unforeseen reason), we always notify the client immediately. We believe these are minimum requirements for delivering a professional service.

Q16: Are they willing to work with and support your one-of-a-kind business applications?

Our Answer: We own the problems with all line-of-business applications for our clients. That doesn't mean we can fix faulty software – but we WILL be the liaison between you and your vendor to resolve problems you are having and make sure these applications work smoothly for you.

Q17: When something goes wrong with your Internet service, phone systems, printers or other IT services, do they own the problem or do they say, "That's not our problem to fix"?

Our Answer: We feel WE should own the problem for our clients, so they don't have to try and resolve any of these issues on their own – that's just plain old good service and something many computer guys won't do.

The 3 Most Costly Misconceptions About Computer Maintenance and Repair

Misconception #1: My computer network doesn't need regular monitoring and maintenance.

This is probably one of the biggest and most costly misconceptions that business owners have. Usually this is because they've been fortunate enough to have never encountered a major disaster; but that's similar to someone thinking they don't need to wear a seat belt when driving a car because they've never had an accident.

Computer networks are complex and dynamic systems that need regular updates and maintenance to stay up, running fast and problem-free. In fact, it's surprising how fast a brand-new PC will slow down after a few weeks of use without proper updates and maintenance. Here are just a FEW of the critical updates that need to be done on a weekly – if not daily – basis:

- Security patches applied – with NEW viruses and hacker attacks cropping up DAILY, this is a CRITICAL part of maintaining your network
- Antivirus updates and monitoring
- Firewall updates and monitoring
- Backup monitoring and test restores
- Spam-filter installation and updates
- Spyware detection and removal
- Monitoring disk space on workstations and servers
- Monitoring hardware for signs of failure
- Optimizing systems for maximum speed

Your computer network is just like a car: if you don't change the oil, replace the filter, rotate the tires, flush the transmission and perform other regular maintenance on your car, it will eventually break down and cost you FAR MORE to repair than the cost of the basic maintenance – and a car is far simpler than a computer network!

If your computer support tech does not insist on some type of regular, automated monitoring or maintenance of your network, then DO NOT HIRE THEM. Lack of system maintenance is the NUMBER ONE reason most people end up losing valuable files and incurring heavy computer repair bills. If your technician isn't offering you these services, you need to find someone else to support your computer or network for two reasons:

1. Either they don't know enough to make this recommendation, which is a sure sign they are horribly inexperienced, *OR*
2. They recognize that they are *profiting* from your computer problems and don't want to recommend steps toward preventing you from needing their help on an ongoing basis. After all, they'll get paid MORE to remove a virus than to make sure your

system is patched, updated and secured (which can be done quickly and inexpensively with good monitoring).

Either reason is a good one to get as far away from that person as possible!

Misconception #2: My nephew/neighbor's kid/brother-in-law/office manager knows this computer stuff and can take care of our computers.

Most people look for a part-time “guru” for one reason: to save a few bucks. But this often comes back to haunt them. We frequently get calls from business owners who desperately need our help to get them back up and running or to clean up a mess that was caused by an inexperienced neighbor, friend or relative who was just trying to help.

If the person you have working on your machine does not do computer repair and support for a living, there is a good chance they won't have the knowledge or experience to truly help you – they are a hobbyist at best. And do you really want a part-time, inexperienced person responsible for handling something as important as your data and computer network? As with everything in life, you get what you pay for. That's not to say you need to go broke to find a great technician, but you shouldn't be choosing someone based on price alone.

Misconception #3: All computer technicians are created equal. Your best option will be the one who offers the lowest price.

As we stated a moment ago, you get what you pay for. A cheap price usually means a cheap job. Really good technicians do NOT work cheap because they are in high demand just like every other professional service category. The only technicians that will work cheap are those who are just starting, and they are grossly inexperienced.

And some shops will hire college kids or newbie technicians because they will work for next to nothing to gain experience, OR they allow interns to support your network because they don't have to pay them at all – but what you don't realize is that an inexperienced technician like this can end up costing more because:

1. They improperly diagnose problems, which means you're paying them to fix the **WRONG** thing and they **STILL** won't resolve your problem. Case in point: A few years ago a TV reporter went undercover to 8 computer repair shops in LA with a perfectly working PC, but simply disconnected a cable in the back (a fix that the **AVERAGE** computer tech would have caught in minutes with a visual inspection). Several shops improperly diagnosed the problem and wanted to charge them anywhere from \$59 to over \$275 to fix it!
2. They could take 3 to 5 times as long to do the same repair an experienced technician could fix quickly. Again, you're paying for those extra hours.
3. They could do **MORE** damage, costing you more money and downtime.

With your client data, accounting records, e-mail and other critical data at stake, do you REALLY want the lowest-priced shop working on your machine?

We take the view that most people want value for their money and simply want the job done right. You will find that we are not the cheapest, but we don't apologize for that. As the owner, I decided a long time ago that I would rather explain our higher rates ONE TIME than make excuses for POOR SERVICE forever. That said, we're not the most expensive either. We simply feel that we should offer a good service at a fair price. That's why we have been able to stay in business for over 25 years and have hundreds of customers who've been with us that entire time.

4 More Mistakes To Avoid When Choosing A Computer Consultant

1. **Choosing a computer consultant based on a single phone call.** We recommend you invite them into your office and ask them for a written proposal. Be clear on what your expectations are and what type of problems you want them to resolve. As stated a moment ago, a competent professional should offer to do an assessment of your network to diagnose your system BEFORE quoting you anything. After all, would you take a doctor's word that you need surgery if they hadn't done x-rays or other diagnostics? Of course not! Prescription without diagnosis is malpractice.
2. **Choosing a computer consultant that doesn't have a written money-back guarantee.** In our view, a good consulting firm should be accountable for their services and for fixing things RIGHT. If you aren't pleased with a job that was done, they should (at a minimum) make it right for free; and if they simply cannot resolve an issue to YOUR satisfaction, you shouldn't get stuck with the bill.

Plus, the fact that they stand behind their work with a money-back guarantee shows they have confidence in themselves to make you a happy client. And don't fall for the "We don't offer one because people will take advantage of us" routine. In our experience, MOST people just want an honest service at a reasonable price. If you give them that, they are happy to pay. Are there a few unethical folks out there? Of course, but they are the minority, and we would rather bite the bullet on the very few dishonest folks so we can gain the trust and confidence of the majority of clients, who just want their problems fixed fast and fixed right.

3. **Choosing a computer consultant without speaking to several of their current clients.** Check their references! Don't just take the sales guy's word that they are good – ask to speak to at least 3 or 4 clients that are similar to you in size and scope. If they hesitate or cannot provide you with references, don't trust them!

Another good sign is that they should have multiple client testimonials and success stories posted on their web site and throughout their marketing collateral. A lack of this may be a sign that they don't HAVE clients who are happy enough to provide a good reference – again, a warning sign.

4. **Choosing a computer consultant who cannot remotely monitor, update and support your network.** In this day and age, a computer consultant who doesn't do this is living in the Stone Age. You want someone to do this because it will dramatically increase your network's security and will enable them to do faster repairs. That's not to say they shouldn't come on-site; but remote monitoring and repairs make fixing problems FASTER for YOU and help AVOID problems cropping up in the first place.

A Final Word...

I hope you have found this guide to be helpful in shedding some light on what to look for when outsourcing the support of your company's network. As I stated in the opening of this report, my purpose in providing this information was to help you make an informed decision and avoid getting burned by the many incompetent firms offering these services.

If you have any additional comments or questions, we welcome them! Have an idea to make this guide even more helpful? Let us know! And, of course, if you are looking for someone you can trust to take over the care and maintenance of "all things digital" in your office, we'd love the opportunity to EARN your business.

Below you will find information on how to request a FREE Network and Cyber Security Assessment. This is, of course, provided for free, with no obligations and no expectations on our part. I want to be clear that this is NOT a bait-and-switch offer or a trick to get you to buy something. My reputation for running an honest and trustworthy business is something I hold very dear. I would never jeopardize that in any way. So why are we offering something like this for free?

Two reasons:

1. We are simply offering this service as a risk-free "get to know us" offer to people we haven't had the pleasure of doing business with. Again, our goal is to allow you to make an informed and confident decision – and offering this is one way we can help you better evaluate us.
2. This will allow us to determine if we even CAN help you. Obviously we can't help everyone, and our services might not be a good fit for you. Conducting this Assessment enables us to do a small project for you to help you evaluate whether or not we're the right company for you without risking your money.

Looking forward to your call!

The Team at Computer Depot Business Solutions
865-909-7606
www.ComputerDepotBusiness.com

FREE Network/ Cyber Security Assessment For All Prospective Clients Who Want To Put Us To The Test!

As a prospective customer, we would like to offer you a FREE Network/ Cyber Security Assessment (\$497 value). During this assessment we will perform a comprehensive multipoint inspection of your entire network to look for potential problems, security loopholes, spyware and other hidden problems that will cause the computers on your network to run slow, act funny, crash and lose data.

We will:

- ✓ Review your system backups to make sure they are working properly and CAN be restored quickly in the event of a disaster.
- ✓ Scan for hidden spyware, malware and viruses that MOST antivirus tools and software can't detect or won't remove.
- ✓ Check for security updates and patches to validate that your network really IS secure.
- ✓ Review your firewall and security settings.
- ✓ Check the integrity of your server and workstations hardware. (*Side note:* Did you know that hardware failure is one of the leading causes of data loss that CAN be detected early and avoided with proper monitoring?)
- ✓ Audit your virus definitions and protection.
- ✓ Conduct a visual scan of your server room and cabling to make sure your network is PHYSICALLY safe and set up properly.
- ✓ Check your overall system performance, space and settings to see if your network is running as fast as it could be.

Why Should You Care About This?

Because there are literally dozens of ways hackers and viruses can – undetected – gain access to and remotely control your network, corrupt your data and use your network as a conduit for spreading spam, viruses and even illegal software.

There are numerous system checks and updates that should be done on a regular basis to ensure maximum speed, performance and security. Ignore them and your system will get progressively slower, more unstable and susceptible to viruses, spyware and hackers.

All mechanical backups have a failure rate of 100% – that means all backups will fail at some point, often without warning. You don't want to find out that your backup was not working the day after your hard drive fried.

How To Request Your FREE Network/ Cyber Security Assessment:

Read On To Hear What Our Clients Have To Say:

BEYOND NO WORRIES

For our practice, having Computer Depot Business means NOT having to worry about HIPAA compliance, IT issues, or software updates. What really sets them apart though, is how quick and thorough they solve problems. Calls or emails are answered promptly, and concerns are addressed in an easy to understand manner. The customer service at Computer Depot Business cannot be beat!

Dr. Krystal Barton OD

PEACE OF MIND

When most practices in our industry think about computers, IT issues, and HIPAA compliance, they probably don't have thoughts of happiness and peace of mind. For us, knowing that Computer Depot is there to answer questions and help with updates and security has been paramount. We truly have peace of mind! We have been so happy ever since they started helping us. Computer Depot Business is the way to go in terms of service, friendliness, responsiveness, and professionalism.

Brittney Fleetwood Admin Manager
The Nursing Center at Little Creek

We are so very glad that Computer Depot Business came to Seymour. Having a reliable company in the area that can meet our computer needs is essential to our operations, as an emergency service. We have purchased new and used computer systems and have had them install a training multimedia system at our main station. They help us update our network security and keep our systems in repair. The owner Thomas Hill and his staff are professional and great to work with."

John Linsenbigler Executive Administrator
Seymour Volunteer Fire Department
